

## **ISO 26000 Stakeholders Global Network Statement of Vision, Mission and Goals**

[approved November 2018]

### **Vision**

When every organization and each individual strives to act responsibly, with consideration for their impacts on society and the environment, we will successfully move toward a sustainable future. We see multi-stakeholder engagement as the strongest force to create a sustainable economy and world.

### **Mission:**

We encourage every organization to maximize its contribution to sustainable development, by using ISO 26000 and involving a wide variety of stakeholders in its decisions. We leverage power from all over the world to support socially responsible management and practices. We seek to provide information, inspiration, linkages to other global documents, and user-friendly tools for implementation, through our global network.

## Goals:

- To promote ISO 26000 as an integrated practical approach for all public and private organizations, including those that are applying the UN Sustainable Development Goals (SDGs).
- To promote ISO 26000 as the leading standard in regards to Social Responsibility worldwide, supporting awareness, distribution and usage.
- To remain as a link to ISO and to ISO member bodies, as the institutional memory of the making of this standard through the unique multi-stakeholder and balanced process.
- To broaden our Network to actively recruit new members, especially younger members, always keeping in mind the value of diversity and multi-stakeholder involvement.
- To consider Global Balance (involvement from Asia, Africa, Europe, Latin America, North America, Middle East, Oceania, and Indigenous People) as an important part of multi-stakeholder involvement.
- To organise quarterly webex meetings to co-ordinate and discuss activities.
- To organise a bi-annual face-to-face event, such as the International Open Forum held in Bali October 2018, to get people together to share good practices, hold sessions on implementation, etc.
- To further develop the linkage documents connecting ISO 26000 with international norms of behavior of the UN, Responsible Business Conduct Guidelines of OECD, and different reporting initiatives, like GRI and Integrated Reporting Framework.
- To pay special attention to support Small and Medium Organizations (SMOs) and Small and Medium Enterprises (SMEs).
- To explore market mechanisms and tools to promote application of ISO 26000.
- To feed communication channels <https://iso26000.info> and the LinkedIn Group on ISO 26000 so that a wider audience can participate and be informed.
